

Care for Cambodia: Transforming Lives and Communities

Since its inception in 2017, Care for Cambodia has been deeply committed to improving the lives and living conditions of the Cambodian community. Our work revolves around providing essential infrastructure, basic necessities, education opportunities, and creating sustainable community projects. Over the past six years, in coalition with our partners, we have had remarkable achievements that bear testament to our unwavering dedication.

Construction Projects

In 2023 alone, we successfully constructed 12 houses, 3 outdoor kitchens, 4 toilets, a library, and a school fence. These infrastructure projects not only provided shelter and safety but also fostered an environment conducive to education and community development. Since 2017, we have also built two village wells, consistently monitoring their water quality and longevity, thereby ensuring villagers have access to clean, safe water — a fundamental human right.

Essential Services

Beyond infrastructure, Care for Cambodia recognizes the importance of basic necessities. In 2023, we served food, clothing, and household essentials to over 50 households. This endeavor aimed to enhance the living conditions of the villagers and provide them with a sense of security and dignity.

Education Opportunities

We firmly believe in the transformative power of education. In 2023, we financed the education of four children at primary, middle, and secondary levels. We covered all educational fees, meal plan costs, and tutoring fees, thus removing financial barriers that could hinder their academic progress. Among these children is an aspiring medical student, whose ambition to serve her community is a testament to the hope and resilience we aim to cultivate.

Community Empowerment

Our organization grew significantly from 2017, recruiting over 50 additional part-time and freelance workers. This expansion not only enhanced our operational capacity but also created job opportunities, contributing to the local economy.

Moreover, we initiated the creation of a community garden. This project promotes sustainable agriculture, and fosters a sense of community ownership and cooperation. It

provides a source of fresh produce for the villagers, and the act of gardening itself has therapeutic benefits.

Research Initiatives

Recognizing the need for evidence-based interventions, we consistently conduct social and scientific research. Such research informs our strategies for improving villagers' quality of life, ensuring that our efforts are effective and responsive to the community's needs.

In conclusion, Care for Cambodia and our partners' accomplishments over the past six years reflect our dedication to transforming lives and communities. We remain committed to our mission, and we look forward to continuing our work in the years to come, making a positive and lasting impact on the Cambodian community.
